A) Latitude-dependent Waves

k1 waves: thick equatorial clouds

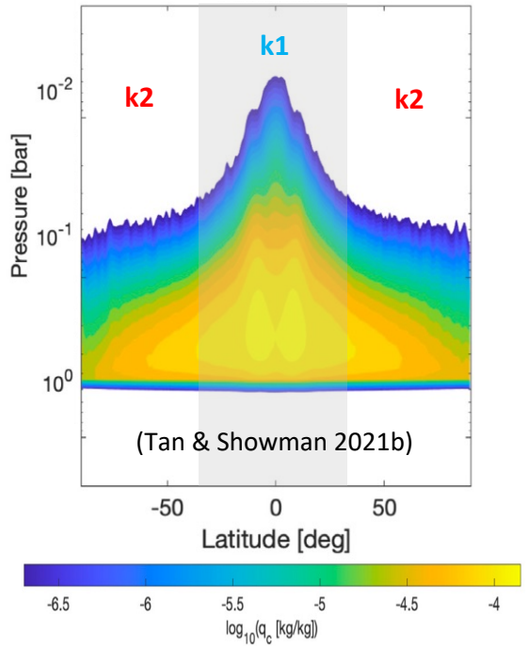

Fe, $MgSiO_3$, Mg_2SiO_4, Na_2S
f_{sed} = 2.0 - 2.2

k2 waves: thinner, mid-latitude clouds at depth?

Fe, $MgSiO_3$: f_{sed} = 3.0 - 3.6

B) Latitudinal cloud-thickness difference

(Cloud mixing ratio, 2.5-hr rotator)

Variability vs. Wavelength Map
