Latitude-dependent Waves

k1 waves: thick equatorial clouds

Fe, $MgSiO_3$, SiO_2
Kzz = 10^7, f_{sed} = 2.0 - 2.5

k2 waves: thinner, mid-latitude clouds at depth?

Fe, $MgSiO_3$, SiO_2
Kzz = 10^6, f_{sed} = 2.0 - 3.5

Latitudinal cloud-thickness difference

(Cloud mixing ratio, 2.5-hr rotator)
